## Enhanced Customization and Efficiency with PDS v6.10

PDS 6.10 delivers greater flexibility and customization with printouts, designed to meet the needs of high-end custom pallet shops.

A new centering option has been introduced for **Discontinuous Deckboards,** which do not span the entire pallet. Previously, these boards could only be aligned to the left or right.

This update expands the notes section in the Pallet Specification and Production Order, allowing users to add more detailed, custom information. Additionally, the Production Order can now be streamlined by hiding select lumber and fastener details, making it more efficient for shop floor use—most designs can now fit on a single page.

What's New in PDS 6.10:

- New centered option for discontinuous deckboards *(see figure above).*
- Expanded notes section in the pallet specification and production order.
- Option to hide select lumber and fastener details in the production order.
- Minor bug fixes and performance improvements.

Pallet Design System Help 24/7

A comprehensive PDS User's Guide is built into the software program to help answer questions 24/7 regarding pallet design. The User's Guide includes an overview of unit load analysis. It is readily available and accessible from the Opening Window Start Dialog, through the Help menu, and at the bottom left of every window within the design wizard. PDS Users can also search this valuable resource to learn more about pallet design from a variety of topics.

Stay updated on the Pallet Design System™ by opting-in to NWPCA email communications for "PDS News." If you need additional support assistance, phone 703-519-6104 or contact PDS Support.
